Project Name	Project - Signs with smart connectivity for Better road safety
Marks	8 Marks

- >> To replace the static signboards, smart connected sign boards are used.
- >> These smart connected sign boards get the speed limitations from a web app using weather API and update automatically.
- >> Based on the weather changes the speed may increase or decrease.
- >> Based on the traffic and fatal situations the diversion signs are displayed.
- >> Guide(Schools), Warning and Service(Hospitals, Restaurant) signs are also displayed accordingly.
- >> Different modes of operations can be selected with the help of buttons.

The screenshot shows a web application development environment. On the left, a sidebar contains a 'Files' panel with icons for Code.gs, index.html, Libraries, Services, and Sheets. The main area displays the JavaScript code for the 'doGet' function, which is a GET handler for a web service. The code includes a 'checkLogin' function that checks if a username and password match entries in a Google Sheet named 'DATA'. The 'doGet' function calls 'checkLogin' and returns the result as a JSON object.
